## Chemistry

**8872/01**

Paper 1 Multiple Choice

**20 September 2012**

**50 minutes**

Additional Materials: *OMR Sheet*  
*Data Booklet*

---

### INSTRUCTIONS TO CANDIDATES

Write your name, class and register number in the spaces provided at the top of this page.  
Write your calculator brand and model/number in the box provided above.

There are **thirty** questions in this section. Answer **all** questions. For each question, there are four possible answers labelled **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the OMR answer sheet.

**Read very carefully the instructions on the use of the OMR answer sheet.**

You are advised to fill in the OMR Answer Sheet as you go along; no additional time will be given for the transfer of answers once the examination has ended.

#### Use of OMR Answer Sheet

Ensure you have written your name, class register number and class on the OMR Answer Sheet.

Use a **2B** pencil to shade your answers on the OMR sheet; erase any mistakes cleanly. Multiple shaded answers to a question will not be accepted.

For shading of class register number on the **OMR sheet**, please follow the given examples:  
If your register number is **1**, then shade **01** in the index number column.  
If your register number is **21**, then shade **21** in the index number column.

---

This document consists of **13** printed pages.

## Section A

For each question there are four possible answers, **A**, **B**, **C** and **D**. Choose the one you consider to be correct.

**1** Which of the following statements contains one mole of the stated particle?

- A** atoms in 38.0 g of fluorine gas
- B** electrons in 24.0 dm<sup>3</sup> of hydrogen gas at room temperature and pressure
- C** neutrons in 1.00 g of helium gas
- D** protons in 2.02 g of neon gas

**2** *Use of the Data Booklet is relevant to this question.*

A typical solid fertiliser for use with household plants and shrubs contains the elements N, P, and K in ratio of 15 g : 30 g: 15 g per 100 g of fertiliser. The recommended usage of fertiliser is 14 g of fertiliser per 5 dm<sup>3</sup> of water.

What is the concentration of nitrogen atoms in this recommended solution?

- A** 0.03 mol dm<sup>-3</sup>
- B** 0.05 mol dm<sup>-3</sup>
- C** 0.42 mol dm<sup>-3</sup>
- D** 0.75 mol dm<sup>-3</sup>

**3** A barium salt, BaFeO<sub>n</sub>, can react with hydrochloric acid to produce iron(III) ions and chlorine gas. In an experiment, upon treatment with excess hydrochloric acid, two moles of BaFeO<sub>n</sub> reacted to yield three moles of chlorine.

What is the value of *n*?

- A** 1
- B** 2
- C** 4
- D** 6

4 Two elements **X** and **Y** have the following properties.

- **X** and **Y** form ionic compounds  $\text{Na}_2\text{X}$  and  $\text{Na}_2\text{Y}$  respectively.
- Element **Y** forms  $\text{YF}_6$  molecule whereas **X** is unable to do so.

Which pair of electronic configurations of **X** and **Y** is correct?

|          | <b>X</b>                | <b>Y</b>                |
|----------|-------------------------|-------------------------|
| <b>A</b> | $[\text{He}] 2s^2 2p^2$ | $[\text{Ne}] 3s^2 3p^2$ |
| <b>B</b> | $[\text{Ne}] 3s^2 3p^2$ | $[\text{He}] 2s^2 2p^2$ |
| <b>C</b> | $[\text{He}] 2s^2 2p^4$ | $[\text{Ne}] 3s^2 3p^4$ |
| <b>D</b> | $[\text{Ne}] 3s^2 3p^4$ | $[\text{He}] 2s^2 2p^4$ |

5 Ions of the two most common isotopes of zinc are shown below:

Which of the following statements is correct?

- A** Both these  $\text{Zn}^{2+}$  ions have the same number of electrons but different number of protons.
- B** Both these  $\text{Zn}^{2+}$  ions have the same electron configuration  $1s^2 2s^2 2p^6 3s^2 3p^6 3d^8 4s^2$ .
- C** The  ${}^{64}_{30}\text{Zn}^{2+}$  ion has fewer neutrons in its nucleus than the  ${}^{66}_{30}\text{Zn}^{2+}$  ion.
- D** The  ${}^{66}_{30}\text{Zn}^{2+}$  ion will be deflected more than the  ${}^{64}_{30}\text{Zn}^{2+}$  ion in an electric field of the same strength.

6 Gaseous particle **X** has an atomic number  $n$  and a charge of +2.  
Gaseous particle **Y** has an atomic number of  $(n + 1)$  and is isoelectronic with **X**.

Which of the following statements correctly describes **X** and **Y**?

- A** **X** has a larger radius than **Y**.
- B** **X** has a larger nuclear charge than **Y**.
- C** **X** has a charge of +2 and **Y** has a charge of +1.
- D** **X** requires more energy than **Y** when a further electron is removed from each particle.

7 In microwave ovens, the wave energy produced is absorbed by certain polar molecules.

Which of the following would absorb microwave energy?

- A cyclohexane
- B cyclohexene
- C trichloromethane
- D tetrachloromethane

8 For the pairs of species shown below, in which does the first species have a larger bond angle than the second?

- A  $\text{CH}_2\text{Cl}_2$ ,  $\text{OCl}_2$
- B  $\text{PH}_3$ ,  $\text{NH}_3$
- C  $\text{SO}_3^{2-}$ ,  $\text{CO}_3^{2-}$
- D  $\text{BrF}_2^-$ ,  $\text{BeCl}_2$

9 In which sequences are the molecules quoted in order of decreasing boiling points?

- A  $\text{CH}_3(\text{CH}_2)_3\text{CH}_3$ ,  $(\text{CH}_3)_2\text{CHCH}_2\text{CH}_3$ ,  $\text{CH}_3\text{C}(\text{CH}_3)_2\text{CH}_3$
- B  $\text{AlBr}_3$ ,  $\text{AlCl}_3$ ,  $\text{AlF}_3$
- C  $\text{SO}_2$ ,  $\text{SiO}_2$ ,  $\text{CO}_2$
- D  $\text{H}_2\text{O}$ ,  $\text{NH}_3$ ,  $\text{HF}$

10 Which of the following has an exothermic enthalpy change?

- A  $\text{Ca (g)} \rightarrow \text{Ca}^{2+}(\text{g}) + 2\text{e}^-$
- B  $\text{Ca (s)} + \frac{1}{2}\text{O}_2(\text{g}) \rightarrow \text{CaO (s)}$
- C  $\text{CaO (s)} \rightarrow \text{Ca}^{2+}(\text{g}) + \text{O}^{2-}(\text{g})$
- D  $\frac{1}{2}\text{O}_2(\text{g}) \rightarrow \text{O (g)}$

- 11** The standard enthalpy change of reaction between calcium and water,  $\Delta H$ , can be determined with the help of the energy cycle below:

The standard enthalpy change of formation of  $\text{Ca(OH)}_2\text{(s)}$  is  $-986 \text{ kJ mol}^{-1}$  while the standard enthalpy change of combustion of  $\text{H}_2\text{(g)}$  is  $-286 \text{ kJ mol}^{-1}$ .

Which of the following is the correct value for  $\Delta H$ ?

- A**  $+700 \text{ kJ mol}^{-1}$   
**B**  $-700 \text{ kJ mol}^{-1}$   
**C**  $+414 \text{ kJ mol}^{-1}$   
**D**  $-414 \text{ kJ mol}^{-1}$
- 12** The graph for the equilibrium,
- $$\text{W (g)} + \text{X (g)} \rightleftharpoons 3\text{Y (g)} \quad \Delta H < 0$$

is given below:

Which of the following changes could **not** account for the change from **Graph 1** to **Graph 2**?

- A** Increase in pressure  
**B** Increase in temperature  
**C** Decrease in amount of **X**  
**D** Decrease in volume of vessel

- 13 Consider the following equilibrium system:

Which of the following change is **not** correct?

- A Increasing the pressure will increase the rate of the backward reaction.
  - B Increasing the mass of  $\text{H}_2$  will cause the equilibrium constant to increase.
  - C Increasing temperature increases the rate constant and equilibrium constant.
  - D Rate of forward reaction is equal to rate of backward reaction when equilibrium is reached.
- 14 The graph shows the change in pH when  $0.25 \text{ mol dm}^{-3}$  acid is gradually added to  $V \text{ cm}^3$  of  $0.25 \text{ mol dm}^{-3}$  base.

Which pair of solutions will give the result as shown in the graph?

- A  $\text{HNO}_3$  and  $\text{NH}_3$
- B  $\text{H}_2\text{SO}_4$  and  $\text{NH}_3$
- C  $\text{CH}_3\text{COOH}$  and  $\text{Ca}(\text{OH})_2$
- D  $\text{CH}_2(\text{COOH})_2$  and  $\text{NaOH}$

- 15** The diagram shows the Boltzmann distribution of the speeds of the molecules of a gas at temperature,  $T_1$ . The letters **P** and **Q** refer to the separate and differently shaded areas.

Number of particles  
with given energy

If the above gas is cooled to a new temperature,  $T_2$ , how would the differently shaded areas, **P** and **Q** change in relation to total area of the curve, **P + Q**?

|          | <b>P</b> | <b>Q</b> | <b>P + Q</b> |
|----------|----------|----------|--------------|
| <b>A</b> | Increase | Decrease | Unchanged    |
| <b>B</b> | Decrease | Increase | Unchanged    |
| <b>C</b> | Increase | Increase | Increase     |
| <b>D</b> | Decrease | Decrease | Decrease     |

- 16** Which factor decreases from Na to Si (excluding Mg and Al) and also from Si to P?

- |          |                         |          |                        |
|----------|-------------------------|----------|------------------------|
| <b>A</b> | Ionic radius            | <b>B</b> | Melting point          |
| <b>C</b> | Electrical conductivity | <b>D</b> | Reactivity with oxygen |

- 17** Element **G** is in the third period of the Periodic Table. The chloride of **G** has a simple molecular structure while the oxide of **G** has a giant ionic structure.

Which of the following statements is true about **G**?

- A** The atomic radius of **G** is smaller than that of chlorine.
- B** The first ionisation energy of **G** is higher than that of Mg.
- C** The chloride of **G** dissolves in water to give a neutral solution.
- D** The oxide of **G** reacts with aqueous sodium hydroxide and aqueous hydrochloric acid.

- 18** **J**, **K** and **L** are elements in Period 3. **K** has a larger ionic radius than **J**, and **L** has a less endothermic first ionisation energy than **K**.

What are elements **J**, **K** and **L**?

|          | <b>J</b> | <b>K</b> | <b>L</b> |
|----------|----------|----------|----------|
| <b>A</b> | P        | S        | Cl       |
| <b>B</b> | P        | Al       | Mg       |
| <b>C</b> | Al       | Mg       | Si       |
| <b>D</b> | Al       | P        | S        |

- 19** One of the isomers of dimethylbenzoic acid is 2,3-dimethylbenzoic acid.

How many different isomers are possible for dimethylbenzoic acid, inclusive of 2,3-dimethylbenzoic acid?

- A** 5                      **B** 6                      **C** 7                      **D** 8

- 20** Deuterium, D, is a heavy isotope of hydrogen. 4-methyldeuteriobenzene is reacted with bromine and a suitable catalyst so that only monobromination takes place.

Assume that the carbon–deuterium bond is broken as easily as a carbon–hydrogen bond.

What proportion of the product will be 2-bromo-4-methyldeuteriobenzene?

4-methyldeuteriobenzene

2-bromo-4-methyldeuteriobenzene

- A** 0%                      **B** 33%                      **C** 40%                      **D** 67%

- 21** Ozone depletion potential, ODP, is a measure of the extent of degradation to the ozone layer that an ozone-depleting substance can cause per unit mass of the substance.

The following table shows the ODP of three ozone-depleting substances.

| substances | $\text{C}_2\text{F}_5\text{Cl}$ | $\text{C}_2\text{F}_4\text{Cl}_2$ | $\text{C}_2\text{F}_4\text{Br}_2$ |
|------------|---------------------------------|-----------------------------------|-----------------------------------|
| ODP        | 0.6                             | 1.0                               | 6.0                               |

Based on the above information, which of the following statements is correct regarding ozone-depleting substances?

- A**  $\text{C}_2\text{F}_4\text{Br}_2$  has a higher ODP than  $\text{C}_2\text{F}_4\text{Cl}_2$  because  $\text{C}_2\text{F}_4\text{Br}_2$  has a higher molar mass.
- B**  $\text{C}_2\text{F}_4\text{Br}_2$  has a higher ODP than  $\text{C}_2\text{F}_4\text{Cl}_2$  because  $\text{C}_2\text{F}_4\text{Br}_2$  has a higher percentage composition by mass of halogen.
- C**  $\text{C}_2\text{F}_4\text{Br}_2$  has a higher ODP than  $\text{C}_2\text{F}_4\text{Cl}_2$  because C–Br has lower bond energy than C–Cl.
- D** Fluorine radical is more harmful to the ozone layer than chlorine radicals or bromine radicals.
- 22** One of the chemicals giving blue cheese its unique aroma is heptan-2-one.

The diagram shows reactions involving heptan-2-one.

Which is the correct identification of compound **T**, reagent **U** and compound **V**?

- |          | compound <b>T</b> | reagent <b>U</b>              | compound <b>V</b> |
|----------|-------------------|-------------------------------|-------------------|
| <b>A</b> | heptane           | $\text{NaBH}_4$               | heptanoic acid    |
| <b>B</b> | heptan-2-ol       | $\text{NaBH}_4$               | heptanoic acid    |
| <b>C</b> | heptanal          | hydrogen gas                  | heptan-2-one      |
| <b>D</b> | heptan-2-ol       | $\text{LiAlH}_4$ in dry ether | heptan-2-one      |

- 23** In which of the following reactions would each molecule of the organic product have the same number of oxygen atoms as each molecule of the organic reactant?

- A** reacting 1-chloropropane with aqueous potassium hydroxide
- B** reacting 2-chloropropane with ethanolic potassium hydroxide
- C** reacting propan-1-ol with acidified potassium dichromate(VI)
- D** reacting 2-phenylpropan-1-ol with acidified potassium manganate(VII)

- 24** The compound  $C_4H_6O_2$  gives butter its distinctive flavour.

It reacts with hydrogen cyanide to form  $C_6H_8N_2O_2$  but does not form a silver mirror with ammoniacal silver nitrate.

What is the structural formula of this compound in butter?

- |          |                 |          |                   |
|----------|-----------------|----------|-------------------|
| <b>A</b> | $CH_3COCH_2CHO$ | <b>B</b> | $CH_3COCOCH_3$    |
| <b>C</b> | $CH_3COCH=CHOH$ | <b>D</b> | $CH_2=CHCOCH_2OH$ |

- 25** Steroidogenesis is the biological pathway by which cholesterol is transformed into other biological steroids. One of the intermediates produced during steroidogenesis in human body is  $17\alpha$ -hydroxyprogesterone.

Which of the following statement is true for one molecule of  $17\alpha$ -hydroxyprogesterone?

- A** It turned aqueous potassium dichromate(VI) green.
- B** It produced one molecule of hydrogen gas when reacted with sodium metal.
- C** It can undergo oxidation, reduction, addition, substitution and elimination reactions.
- D** It produced an organic product with two more hydrogen atoms when reacted with hydrogen gas.

## Section B

For each of the questions in this section, one or more of the three numbered statements **1** to **3** may be correct.

Decide whether each of the statements is or is not correct (you may find it helpful to put a tick against the statements which you consider to be correct).

The responses **A** to **D** should be selected on the basis of

| <b>A</b>                      | <b>B</b>                        | <b>C</b>                        | <b>D</b>                 |
|-------------------------------|---------------------------------|---------------------------------|--------------------------|
| <b>1, 2 and 3</b> are correct | <b>1 and 2</b> only are correct | <b>2 and 3</b> only are correct | <b>1</b> only is correct |

No other combination of statements is used as a correct response.

- 26** Beryllium difluoride,  $\text{BeF}_2$ , reacts readily with trimethylamine,  $(\text{CH}_3)_3\text{N}$ , to form a stable addition product. Nitrogen trifluoride has no reaction with trimethylamine.

Which of the following statements are true?

- 1** Nitrogen trifluoride does not react as the nitrogen atom lacks energetically accessible orbitals for reaction.
- 2** The bond angle in the addition product is  $109.5^\circ$ .
- 3** The molar ratio for the reaction between  $\text{BeF}_2$  and  $(\text{CH}_3)_3\text{N}$  is 1:1.

- 27** The graph shows the first thirteen ionisation energies for element **Z**.

What can be deduced about element **Z** from the graph?

- 1** The oxide of **Z** dissolves in water to form an alkaline solution.
- 2** The chloride of **Z** undergoes hydrolysis to form a solution of pH 3.
- 3** The element **Z** is an element in Period 2.

The responses **A** to **D** should be selected on the basis of

| <b>A</b>                      | <b>B</b>                        | <b>C</b>                        | <b>D</b>                 |
|-------------------------------|---------------------------------|---------------------------------|--------------------------|
| <b>1, 2 and 3</b> are correct | <b>1 and 2</b> only are correct | <b>2 and 3</b> only are correct | <b>1</b> only is correct |

No other combination of statements is used as a correct response.

**28** Which of the following reactions are hydrolysis reactions?

- 1** conversion of  $\text{CH}_3\text{CO}_2\text{CH}_2\text{CH}_3$  into  $\text{CH}_3\text{CO}_2\text{H}$  and  $\text{CH}_3\text{CH}_2\text{OH}$
- 2** conversion of  $\text{CH}_3\text{CH}_2\text{CN}$  into  $\text{CH}_3\text{CH}_2\text{CO}_2^-\text{Na}^+$
- 3** conversion of  $\text{P}_4\text{O}_{10}$  into  $\text{H}_3\text{PO}_4$

**29** Alkanes can be prepared from chloroalkanes by heating under reflux with sodium (in ether) according to the equation:

Which alkanes will be produced if a mixture containing equal amounts of  $\text{CH}_3\text{CH}_2\text{Cl}$  and  $\text{CH}_3\text{CHClCH}_3$  are used?

- 1**  $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_3$
- 2**  $\text{CH}_3\text{CH}_2\text{CH}(\text{CH}_3)_2$
- 3**  $\text{CH}_3\text{CH}(\text{CH}_3)\text{CH}(\text{CH}_3)_2$

The responses **A** to **D** should be selected on the basis of

| <b>A</b>                      | <b>B</b>                        | <b>C</b>                        | <b>D</b>                 |
|-------------------------------|---------------------------------|---------------------------------|--------------------------|
| <b>1, 2 and 3</b> are correct | <b>1 and 2</b> only are correct | <b>2 and 3</b> only are correct | <b>1</b> only is correct |

No other combination of statements is used as a correct response.

**30** The following compound was heated with ethanolic sodium hydroxide.

Which of the following could represent the structure of the organic product?

**End of paper**

**ANSWERS**

|           |          |           |          |           |          |
|-----------|----------|-----------|----------|-----------|----------|
| <b>1</b>  | <b>D</b> | <b>11</b> | <b>D</b> | <b>21</b> | <b>B</b> |
| <b>2</b>  | <b>A</b> | <b>12</b> | <b>C</b> | <b>22</b> | <b>D</b> |
| <b>3</b>  | <b>C</b> | <b>13</b> | <b>B</b> | <b>23</b> | <b>B</b> |
| <b>4</b>  | <b>C</b> | <b>14</b> | <b>B</b> | <b>24</b> | <b>B</b> |
